Art Unit: 2626

DETAILED ACTION

1. This action is responsive to communications: Application filed 24 July 2003. Claims 1-40 are pending.

Information Disclosure Statement

2. The information disclosure statement(s) (IDS) submitted on 24 December 2004 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-8, 10-11, 13-15, 17-18, 20-28, 30-31, 33-35, 37-38, and 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Pizano et al. (EP o 865 189 A2) referred to as Pizano hereinafter.

<u>Claims 1 and 21</u>: **Pizano** discloses a method and apparatus for inserting a user's annotations into a message, comprising:

- i. providing a speech rendering of said original message (Abstract);
- ii. annotating said speech message with at least one speech annotation (Abstract); and
- iii. inserting said speech annotation into said original message (Abstract).

Art Unit: 2626

<u>Claims 2 and 22</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above wherein said original message is a text E-mail message (page 2, lines 15-20).

<u>Claims 3 and 23</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above wherein said original message contains at least one attached document (page 2, lines 22-26, Fig. 16).

<u>Claims 4 and 24</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above wherein original message is a voice message (page 2, lines 29-33).

<u>Claims 5 and 25</u>: **Pizano** discloses a method and apparatus as per claims 2 and 22 above wherein said step of providing a speech rendering of said original message comprises converting said text message to speech (page 5, lines 25-26, 'given the option to receive an audible version of the message over the phone,').

<u>Claims 6 and 26</u>: **Pizano** discloses a method and apparatus as per claims 3 and 33 above wherein said step of providing a speech rendering of said original message comprises converting said attachment to speech (page 2, lines 34-36, 'controls a media converter which converts media to fax or media to audio and an audio/fax player,' [emphasis supplied]).

<u>Claims 7 and 27</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of connecting to the mailbox of said email message by establishing a voice connection using a landline telephone or a mobile telephone (page 3, lines 27-28; Fig. 2).

<u>Claims 8 and 28</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above wherein said annotating step includes recognition of predefined commands for starting and stopping said speech annotation (page 4, lines 27-28, 'Message generator 23 records voice from the user;' page 5, lines 35-55 discloses a sample of an interaction where a user controls the

Art Unit: 2626

functions regarding review, start, stop, etc...). Therefore, it is inherent that if a user has the ability to record their voice and review/save recognized input using interaction with the system over the telephone, that one would be able to control the starting/stopping of messages.

<u>Claims 10 and 30</u>: **Pizano** discloses a method and apparatus as per claims 8 and 28 above wherein said commands are entered via Dual Tone Multi-Frequency (DTMF) tones (page 5, lines 35-55).

<u>Claims 11 and 31</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of using an interactive voice response (IVR) (page 5, lines 31-55 discloses wherein a prerecorded voice interactively responds to commands spoken and entered via DTMF by a user.).

<u>Claims 13 and 33</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of recognizing said speech annotations of said caller (page 4, lines 27-29).

<u>Claims 14 and 34</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of converting said speech annotations to text (page 4, lines 27-29, 'composes it as an E-mail message,').

<u>Claims 15 and 35</u>: **Pizano** discloses a method and apparatus as per claims 14 and 34 above wherein said step of converting annotated voice command to text is accomplished using Automatic Speech Recognition (ASR) and Speech-to-Text conversion (page 4, lines 27-29, 'composes it as an E-mail message,').

Art Unit: 2626

<u>Claims 17 and 37</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, wherein said speech annotation is inserted in said original message as a sound file (page 5, lines 5-11).

<u>Claims 18 and 38</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of storing said annotated message at the Unified Messaging server after inserting said speech annotation into said message (page 4, lines 28-31).

<u>Claims 20 and 40</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, further comprising the step of forwarding said annotated message to another user (page 4, lines 23-29).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 9, 12, 29, and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pizano in view of Kurganov (US 2001/0054085 A1) referred to as Kurganov hereinafter.

<u>Claims 9, 12, 29 and 32</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, however, wherein **Pizano** does distinctly disclose a user having the capability to interact with a system using predetermined commands, **Pizano** fails to distinctly disclose wherein said commands are user-defined speech commands. However, **Kurganov** does disclose a personal voice-based system for gathering information by use of commands, specifically disclosing the

Art Unit: 2626

use of user assigned speech commands for interacting with and causing an automated system to perform desired tasks (Abstract, 'This record identifies the location of the information source and also contains a recognition grammar based upon a speech command assigned by the user. Upon receiving the speech command from the user,').

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to include the teachings of **Kurganov** in the system of **Pizano** because speech recognition allows a user to perform said tasks simply by the use of a telephone as well as provide a level of customization suited to each user (**Kurganov**, col. 1, paragraphs [0004]-[0007]).

7. Claims 16 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Pizano** in view of **Handley (USPN 5,349,648)** referred to as **Handley** hereinafter.

<u>Claims 16 and 36</u>: **Pizano** discloses a method and apparatus as per claims 1 and 21 above, however failing to, but **Handley** does, disclose the automatic insertion of text when correcting or annotating a document (e.g. E-mail) (col. 16, lines 29-34).

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to include the teachings of **Handley** in the system of **Pizano** because this would save a substantial amount of time and energy, especially when dealing with numerous messages (**Handley**, col. 16, lines 25-30).

8. Claims 19 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pizano.

Art Unit: 2626

<u>Claims 19 and 39</u>: **Pizano** discloses a method and apparatus as per claims 18 and 38 above, however failing to distinctly disclose wherein a new copy of an annotated message is created. However, **Pizano** discloses wherein an annotated message is saved for use at a later time.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to create another copy since it was known in the art that if the capability to save a document or message is present, it is common knowledge within the computing arts that it is also possible to recreate said document a multitude of times. One of the key advantageous features of digital storage is the constant reproducibility of results useful in 'backing up' important documents. This allows for the storage of a master copy on a server in the event that an important annotated message becomes lost or corrupted, while still providing other copies to be distributed to the people that the message was originally intended for.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wycherley et al. (USPN 5,163,081), Haskell et al (USPN 5,890,120), Alfred et al. (USPN 5,894,504), and Towell (USPN 5,911,129) all disclose the use of well-known ASR speech-to-text systems.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin W. Rider whose telephone number is (571) 270-1068. The examiner can normally be reached on Monday - Thursday 7:30AM - 5:00PM.

Art Unit: 2626

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David R. Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
